The Human Immune System and Application of Bioengineering

Guide for Curriculum Unit 14.04.02
by Terry M. Bella

This is a unit that covers the Connecticut high school science content requirements concerning infectious diseases. To help students develop a full understanding of what disease means they first need to understand the human immune system. This unit takes a look at disease as a failure of the immune system. This is a functional perspective because it allows for discussion around how to engineer a better immune system.

(Recommended for Biology, grades 9 and 10 and Anatomy and Physiology, grades 9-12)
